

750,000 barrels of oil saved*

Reducing foreign oil with solar energy

We're making the most of Florida's own sunshine, turning it into clean energy and using it to power your business. By using American-made energy sources, including solar, we've been able to reduce our dependence on foreign oil by more than 98 percent. Through solar energy alone, we've saved the equivalent of 750,000 barrels of oil over the last three years. Learn how we're changing Florida's energy today with our state's sunshine. [» FPL.com/solar](http://FPL.com/solar)

* Barrels of oil figure represents the equivalent amount needed if electric generation produced by FPL's solar plants since 2009 had been produced using oil.

Martin Next Generation Solar Energy Center – near Indiantown, Fla.

We're keeping business rates low

Small business bill comparison*

National Average **\$194.79**

Florida Average **\$191.79**

FPL Bill - 2014 **\$154.76**

* Based on typical total bill of 1,500-kWh GS-1 rate class, representing a majority of FPL business customers. FPL bill amount is effective January 2014 and reflects rates and charges approved by the Florida Public Service Commission. Florida average is as of October 2013 and national is as of July 2013. Summary of service charges

Type of Service Charge	Charge
Service connection To transfer, open or reopen an existing account	\$14.88
Reconnection Reconnect service following non-payment	\$17.66
Late payment For payments received after the due date	Greater of \$5 or 1.5% applied to any past-due unpaid balance of accounts
Return payment Charge for a check returned by the bank	\$25 if \$50 or less \$40 if \$300.01 – \$800 \$30 if \$50.01 – \$300 5% if greater than \$800
Field collection For payment collection on a delinquent account	\$5.11

YOUR RATES AND CHARGES

The Florida Public Service Commission sets base rates and other charges on your bill. Business rate classification is based on your maximum monthly electrical usage and when you use electricity. Qualifying for another rate may produce savings for some customers. For example, with time-of-use rates, you are billed at a lower rate for off-peak usage and a higher rate for peak-period usage. To benefit, you must shift electrical use from the following peak hours, Monday through Friday:

- » April 1 to Oct. 31, noon to 9 p.m.*
- » Nov. 1 to March 31, 6 a.m. to 10 a.m. and 6 p.m. to 10 p.m.*

For more information about your bill or to view available business rate options that might be more economical for your business:

Resale of electric service prohibited

The Florida Administrative Code prohibits the resale of electricity for profit. The actual cost of electricity billed by FPL may be reasonably allocated among tenants, lessees and other entities as long as no profit is made.

Gross receipts tax

FPL pays 2.5 percent of gross electric revenues to the state in the form of a gross receipts tax. This tax appears as a separate line item on your bill.

Learn about deposits

Since all customers are billed for electricity after it's used, we may ask those opening new accounts to pay a deposit amount equal to approximately two months of average bills at the service address, with a \$25 minimum. If your average usage turns out to be higher than the estimated cost, we may ask you to pay the difference to bring the deposit to the required level.

For deposits held more than six months, you will earn 2 percent interest from the time the deposit is paid in full, and 3 percent interest for a deposit held 23 continuous months after 12 months of prompt payment. This interest is credited to your account annually. Business customer deposits may be refunded if the account meets certain criteria. Learn more about refunds, accepted payment options and other deposit information: » FPL.com/bizdeposits

Earn A+ in savings with efficiency upgrades

You can cool your business more efficiently and lower energy costs just like Charlotte County Public Schools. This school district used FPL rebates to install energy recovery ventilation systems, which use energy from a building's exhaust airflows to pre-cool outside air before it's processed by the A/C. This helped one school lower its electric bill by 15 percent. See if an ERV system is right for you:
